Móz Metals are 80% post-industrial Recycled Aluminum.

Contributes to LEED 2.0 MR Credit 4 - Recycled Content.

"Aluminum is recycled extensively from both post-consumer and post-industrial sources and provides the most valuable component for most municipal recycling efforts. A survey in late 2003 indicated that the recycled content of domestically produced, flat rolled products for the Building and Construction market was approximately 80 - 85%.*

In addition, at the end of their long, useful life, aluminum roofing and siding panels can be repeatedly recycled back into similar products with no loss of quality."

-Aluminum Association Technical Information Service

* This number refers to a total recycled content, including both post-consumer and manufacturing scrap.
